Energyroof plus®

Narrow module design for even greater versatility

Energyroof plus® – Design and technology, the perfect combination.

Opt for the ideal combination of sophisticated design and state-of-the-art electricity generation with the Energyroof plus, the TÜV-certified roof-integrated system from SolarWorld. Instead of conventional roofing, the roof is covered with solar laminates and supplies clean electricity from the sun. Whether new-build or refurbishment, the Energyroof can be installed as either a complete roof cover or a roof-integrated solution. When it comes to producing clean energy, count on a product whose performance is as impressive as its looks.

Energyroof plus®

SolarWorld's Energyroof plus impresses with proven technology and a new laminate shape. The new SolarWorld Compact mono black laminates now offer even greater versatility. Weather-resistant EPDM rubber mounting gaskets form a tight seal with the high-quality aluminum mounting system, protecting your roof as well as the electrical connections from all kinds of weather.

TÜV-TESTED

- Qualified, IEC 61215
- Safety tested, IEC 61730
- Periodic Inspection

TECHNICAL DESCRIPTION

- > Verifiable structural loading according to Eurocode 1 and DIN 1055
- > Replaces conventional roofing with high quality solar laminates
- > Suitable for SolarWorld Compact mono black laminates
- > The laminates' special glass surface utilises rain to provide excellent self-cleaning
- > Highly versatile thanks to narrow module format

DESIGN

- > High quality aluminium substructure provides secure and reliable mounting
- > Lightweight and easy to transport
- > Weather-resistant EPDM rubber clamps make installation easy
- > Conveniently-sized laminates facilitate rapid installation
- > Connections laid underneath the laminates to ensure optimum weather protection
